

March UNL Extension Workshops in Weed Resistance Management

Learn what you can do now

Herbicide-resistant weeds are increasing in Nebraska. Uncontrolled horseweed, kochia, giant ragweed and waterhemp are becoming an all too common sight in commodity crop production. To help combat the issue, University of Nebraska–Lincoln Extension weed scientists will offer four workshops on new tools to battle weed resistance.

These “hands-on” workshops will demonstrate how to use the Herbicide Site of Action Numbering System in the 2013 Guide for Weed Management Guide for Nebraska and cover these topics:

- herbicide tolerant crops
- how weed resistance develops
- overview of weed resistance in the Midwest and Nebraska
- examples/practical solutions for major weed resistance cases in Nebraska

Workshops will be held at:

Norfolk Monday, March 18th

Life Long Learning Center, Northeast Community College

Auburn Tuesday, March 19th

Nemaha County Fairgrounds

Ogallala Wednesday, March 20th

Valentinos Pizza meeting room

Alliance Thursday, March 21st

Alliance Learning Center

Speakers will include Greg Kruger, Bob Wilson, and Stevan Knezevic at Ogallala and Alliance, and Amit Jhala, Lowell Sandell, and Stevan Knezevic at Norfolk and Auburn. Extension Educators collaborating with the workshops include Gary Lesoing, Doug Anderson, and John Thomas.

UNIVERSITY OF
Nebraska
Lincoln EXTENSION

Online preregistration is required.
For more information, please visit:
go.unl.edu/weedresistmgt-workshop13

Registration

Online preregistration is required. Cost is \$30 and includes a variety of printed materials. Doors will open at each site at 8:30 a.m. local time and the meeting will be held from 9 a.m. to noon. Register early as attendance will be limited to 30 people per site in order to facilitate the hands-on format of these workshops.
