

# EXPLOITING FUNGAL MICROBIOMES FOR PLANT STRESS RESISTANCE AND IMPROVED YIELDS IN COTTON AGROECOSYSTEMS

March 10  
3:30 pm

Presented by

**GREG SWORD**

*Professor & Charles R. Parencia Chair in Cotton Entomology,  
Department of Entomology, Texas A&M University*

Beneficial fungal endophytes can confer protection to plants from a variety of stressors and improve yields in major agricultural crops. This talk will highlight progress in the targeted application of fungal endophytes in cultivated cotton (*Gossypium hirsutum*) to mediate resistance to multiple stressors including insects, nematodes and drought, with significant positive impacts on plant performance and yields in the field.

Keim Hall, Room 150  
UNL East Campus  
Refreshments served at 3pm
