

# RESPONSES OF SORGHUM AND WHEAT MODIFIED FOR INCREASED USABILITY TO PATHOGENS

Presented by

**DEANNA FUNNELL-HARRIS**

*Research Plant Pathologist, Wheat, Sorghum and Forage Research Unit, USDA-ARS;  
Adjunct Associate Professor, Plant Pathology, University of Nebraska-Lincoln*

## Agronomy and Horticulture Fall 2017 Seminar Series

Deanna Funnell-Harris' research focuses on responses of sorghum metabolically modified for increased usability, to grain and stalk pathogens. Recently, she has studied the response of modified wheat to the insidious disease, Fusarium head scab. The surprising results have demonstrated that these changes do not always result in a more susceptible plant.

**FRIDAY**  
**September 15**  
**3:30 pm**

*Refreshments served at 3pm*

**Keim Hall, Room 150, East Campus**  
**University of Nebraska-Lincoln**

**LIVE STREAMING**
