

SERENDIPITOUS APPLIED AGRONOMY: EXTENSION AND RESEARCH IN THE BLENDER (AND SOME PHILOSOPHY)

Presented by

ROGER ELMORE

*Professor and Extension Cropping Systems Agronomist, Agronomy and Horticulture,
University of Nebraska-Lincoln*

Agronomy and Horticulture Fall 2017 Seminar Series

Serendipitous agronomic research capitalizes on “rare” environmental situations that most agronomists and certainly farmers hope to never experience. Over the course of a few decades though, it is surprising how often the results of these nearly spontaneous research projects prove useful. This type of work represents a blend of extension and research and will be discussed in this seminar.

FRIDAY
October 20
3:30 pm

Refreshments served at 3pm

**Keim Hall, Room 150, East Campus
University of Nebraska-Lincoln**
