

COVER CROP MANAGEMENT AND INSECT INTERACTIONS

Presented by

JUSTIN MCMECHAN

*Assistant Professor, Crop Protection and Cropping Systems Specialist,
Eastern Nebraska Research and Extension Center, University of Nebraska-Lincoln*

Spring 2019 Agronomy and Horticulture Seminar Series

Cover crop adoption is largely driven by a number of agronomic factors that vary depending on the producer's goals. Insects are rarely discussed in cover crop systems unless significant economic losses occur. McMechan will discuss how cover crop management practices might alter beneficial insect activity or risk of insect pests.

**FRIDAY
February 8
3:30 pm**

Refreshments served at 3 pm

**Room 150, Keim Hall, East Campus
University of Nebraska-Lincoln**
